

# REAL ESTATE PRICE CHANGE PREDICTION IN YEREVAN BASED ON LOCATION

| RESEARCH PROPOSAL

Lecturer: **Arthur Pokrikyan**

Authors: **Karakhanyan Aram**  
**Lachinyan Izabela**  
**Hakobyan Hakob**

Date: **22/12/2022**

THE **PROBLEM** IS THAT...

PRICE **FLUCTUATIONS** RELATED TO SEASONAL,  
LOCATIONAL, ECONOMICAL AND OTHER FACTORS  
ARE **CHALLENGING** FOR **INVESTORS**.

A series of three parallel white lines of varying lengths, slanted upwards from left to right, located in the bottom right corner of the slide.

# WHAT HAS ALREADY BEEN DONE IS...

Category	Name of features	Descriptions	Min.	Max.	Median	Std. Dev.
House	#BEDROOM	The number of bedrooms	1	5	-	-
	#BATHROOM	The number of bathrooms	1	3	-	-
	#PARKING	The number of parking spaces	1	5	-	-
	LANDSIZE	The land size of the house ( $m^2$ )	340	2500	708.79	291.73
	INCOME	Family weekly income ( $K$ )	935	2836	1553.91	387.96
Education	SAID	Statistical area level	SA1	SA4	-	-
	POSTCODE	Postal code	3000	3996	-	-
	SCH_DISTRICT	School district where the house is located	1	100	-	-
	SCH_NEAREST	School closest to the house	1	500	-	-
	PSCH_RANK	The ranking of primary school	3	500	-	-
Transportation	SSCH_RANK	The ranking of secondary school	1	500	-	-
	STN_DIS	Distance to the nearest train station ( $m$ )	23	5040	2026.22	1186.78
	STN_TIME	Walking time to the nearest train station ( $min$ )	1	126	34.75	20.36
	CBD_PUB_DIS	The train distance to city center ( $m$ )	1300	82600	35239.52	14594.42
	CBD_PUB_TIME	The train time to city center ( $min$ )	6	101	48.33	16.64
Facility	CBD_PRI_DIS	The self-driving distance to city center ( $m$ )	1245	83497	35109.47	14678.34
	CBD_PRI_TIME	The self-driving time to city center ( $min$ )	10	120	47.98	18.58
	SHOP_DIS	The distance to nearest shopping center ( $m$ )	5	4999	1643.19	961.48
	HOSPITAL_DIS	The distance to nearest hospital ( $m$ )	15	5000	1832.83	1102.66
	GP_DIS	The distance to nearest clinic ( $m$ )	8	4999	957.21	745.01
SALES_DATE	MARKET_DIS	The distance to nearest supermarket ( $m$ )	25	5000	1452.63	847.71
	SALES_DATE	The sales time of the houses	Jan. 2015	Jan. 2018	-	-
HOUSE_PRICE		The sales price of the houses ( $K$ )	262	2090	680.54	353.97

(d) Task definition based on MARKET

# THE **GOAL** OF OUR RESEARCH IS...

TO FIND OUT HOW MUCH THE **CHANGE** OF REAL  
ESTATE **PRICES** WILL BE ON A CERTAIN **DATE** IN A  
CERTAIN **AREA** BASED ON **LOCATIONAL** VARIABLES.

A series of three parallel white lines of varying lengths, slanted upwards from left to right, located in the bottom right corner of the slide.

# THE VISUALIZATION OF OUR IDEA

NOT THIS

# THE VISUALIZATION OF OUR IDEA

Yezrevan >  
prediction  
from: 2022  
to: 2030  
based on  
☐ normal trends  
☐ forced major  
☐ infrastr. dev.

< descriptions: >  
● no significant change | 0-5% ↑  
● golden square | 5-15% ↑  
● high potential of increase | 15-50% ↑  
● the highest return rates | 50+ ↑

BUT THIS

# THE MAIN HYPOTHESIS ARE...

- If new projects aimed at **improving infrastructures** are implemented in a district, then the *price increase* in that district should be **higher** than the others.
- **Inflation** that is not related to **natural trends** (immigration, war, epidemic, etc.) has a **temporary** nature, and its effect is **neutral** in the **long run**.
- If the city **expands** in any direction, then the **price increase** will be the **largest** in those **directions** during the observed period.

# THE MAIN VARIABLES WE ARE GOING TO USE ARE...

1. Real estate prices as a dependent variable
2. Education-- quality and accessibility of schools, kindergardens
3. Accessibility of metro station
4. Distance and self-driving time from the center of the distinct to the city center
5. Supermarket 24/7
6. Hospitals. clinics
7. Parks, green areas
8. Entertainment areas
9. Shopping centers/malls
10. Migration rate
11. Urbanization rate
12. Number of workplaces

# THE MAIN STAGES OF MODELING ARE...

1. time series modeling with **ARIMA** (*autoregressive integrated moving average*) to predict the future values for the features that tend to change over time;
  2. checking the significance levels for each features to chose the most significant ones, using **Multiple Linear Regression** models
  3. computing the average future price for each district in Yerevan having the features mentioned above using **Machine Learning**.
- 
- A series of white lines of varying lengths and orientations are positioned on the right side of the slide, creating a modern, abstract graphic element.

# THE MAIN RISKS ARE ...

1. Lack of data
  2. Emergency situations
  3. Low performance of the model
  4. Lack of time, skills, ~~money~~, tools (so called resources)
  5. Lack of clarity
- 
- A series of several parallel white lines of varying lengths and slopes, located in the bottom right corner of the slide, creating a modern, abstract graphic element.

Stage	Activity	Estimated duration
<b>Research design and planning</b>	Finalise research problem/questions	two day
	Develop research design	four day
	Prepare research proposal	one week
<b>Literature review</b>	Search, capture and synthesise relevant literature	one week
	Prepare draft literature review	five day
<b>Data collection</b>	Finalise sampling plan	two week
	Develop data collection instrument	one and half week
	Pre-test/pilot data collection instrument	one week
	Carry out data collection	two week
	Write up data collection	one week
<b>Data analysis</b>	Prepare data for analysis	one month
	Analyse data	two month
	Draw conclusions/ recommendations	five day
<b>Writing up</b>	Final draft of application	three month
	Review draft	one week
	Final editing	one week
	Submit to extramural funder	six month
